

## Line edged frame effect in fireworks

---

This effect has a few Edge options like dots, lines, lumpy, pixels, rough and torn paper. Follow these simple steps to do that.

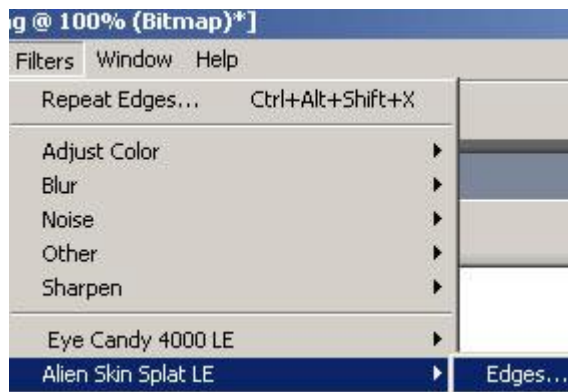

### Step 1

Open an image on the canvas.

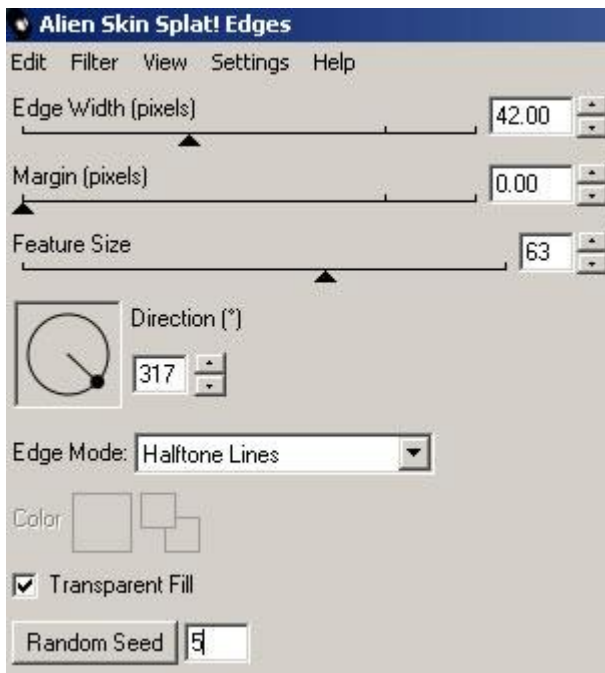

### Step 2

Select the image and go to **Filters>Alien Skin Splat LE>Edges** as you see in the screenshot given below.

### Step 3

See the **Alien Skin** window below. Select **Halftone Lines** option from **Edge Mode**.

#### Step 4

Adjust the Edge Width, Margin and Feature Size sliders. Change values. (for example : Edge Width - 42, Margin - 0, Feature size - 63, Direction – 317).

If you want to give a transparent fill for the image then you can check the option Transparent Fill.

Can be adjusted the Random Seed value also. You can see the preview in the right side itself.

#### Step 5

Here's the image with a line edged frame and a transparent fill!

Here's the image with a line edged frame and with a color fill!
